## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5, 16, 19, and 20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 5 – the marker cannot be located distally of the retainer subassembly since the delivery member is proximally located with respect to the subassembly. Claim 16 – “said distal end” lacks antecedent basis since more than one distal end has been previously recited. Claims 19 and 20 are vague since the vaso-occlusive device is not an element of the retainer assembly. It is only adapted to be used in conjunction with the retainer assembly. Therefore, it is improperly claimed in combination with it.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-5 and 19 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Eder (6,063,070). The Eder patent discloses a retainer assembly having a retainer subassembly including a plurality of radially extending elements (loops). The loops can include a fabric mesh

therein. An electrolytic joint connects an elongated delivery member to the retainer subassembly.

In Figure 3, the joint can be integrally continuous.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-16 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eder (6,063,070) in view of Purdy (5,527,338). The Eder assembly fails to disclose the fabric attached between the loops. This feature would have been obvious given the teaching of Purdy which discloses fabric between radially extending members in a similar occlusion device. Such a modification would increase the capability of the Eder device to occlude the aneurysm. Further, Purdy teaches the use of Dacron for the fabric. The use of collagen for various implantable elements is well known in the art. Therefore, its selection for the material of the fabric would have been an obvious matter of design choice.
